

uAuf2)

Assign class B responsibility of creating instance of class A if

- B aggregates A objects
- B contains A objects
- B records instances of A objects
- B closely uses A objects
- B has the initializing data for creating A objects
- where there is a choice, prefer
- B aggregates or contains A objects
- Key idea: Creator needs to keep reference anyway and will frequently use the created object

Assign a responsibility to the information expert, the class that has the information necessary to fulfill the responsibility

Auf 3)
