

2)

low cost because i have no employees and no office building. Only have to pay for myself and energy bill.

3)

Staffing: me, because i can not afford employees.

4)

Agile development like Scrum since i am not experienced in AR development and will make mistakes. Thus frequent iterations would be useful.

5)

- removing features that are not as important
- get more employees (unrealistic)
- paralelize tasks if possible
- add less important features after the launch
- analyze the gantt chart to find bottleneck tasks
